1. INTRODUCTION

This is a step-by-step user's guideline to synchronize users' contacts from Smartphone to XOR X2.

2. SUMMARY

3. INSTRUCTIONS:

3.1. Installation on Smartphone

- Download from Google Play, please use this link:
<https://play.google.com/store/apps/details?id=uk.xorinc.contacttransfer>
- Download from App Store, please use this link:
<https://apps.apple.com/vn/app/xor-smart-contact/id1583054283>

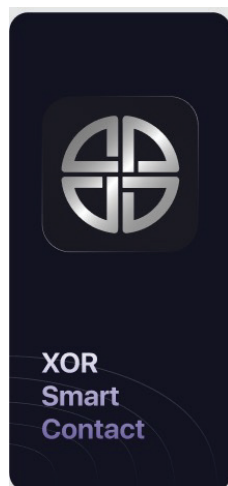

3.2. Detailed Instructions

Important notes:

- During the process of contact download and synchronization, XOR and smartphone require stable internet connection.
- Smart Transfer is now available on all OS versions.
- Export Contact function will be available for OS versions from 194 onward.
- Latest software update is advised.

3.2.1. Launch the App on Smartphone

Launch XOR
Smart Contact
on your
Smartphone

Select
“**Transfer
contacts**” to
activate the
synchronization
of contact data

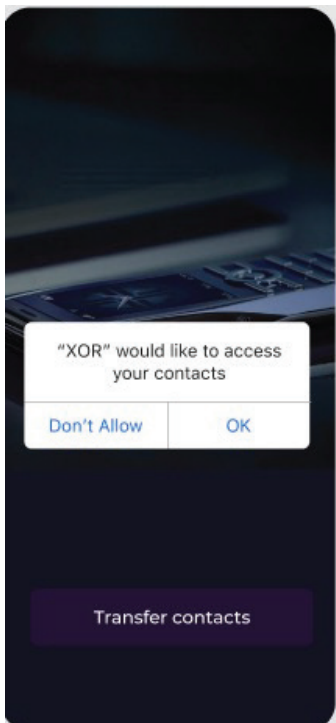

3.2.2. Grant access

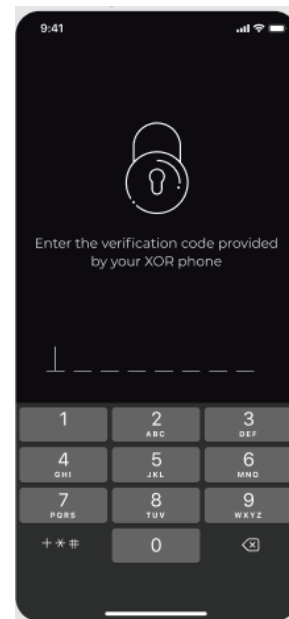

When selecting **“Transfer Contacts”**, a pop-up shows to ask to grant access to the users’ contacts.

Choose “OK” to grant the App to access contacts.

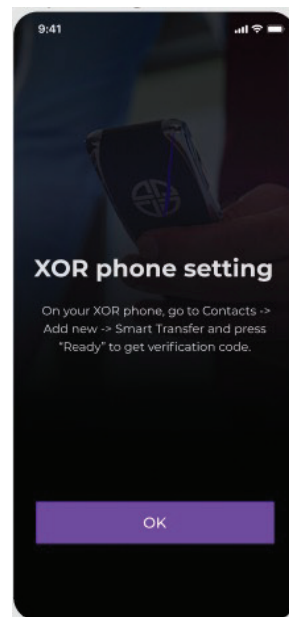

Choose “Don’t Allow” to reject access to contacts.

Continue with “OK” to enter the verification code.

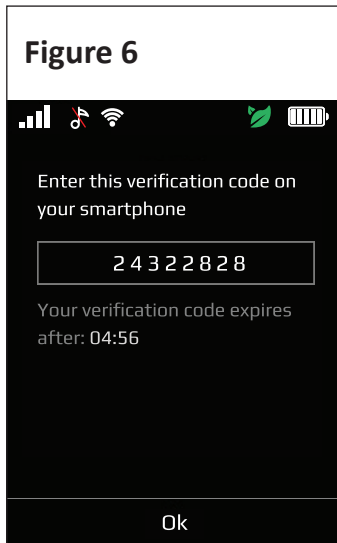

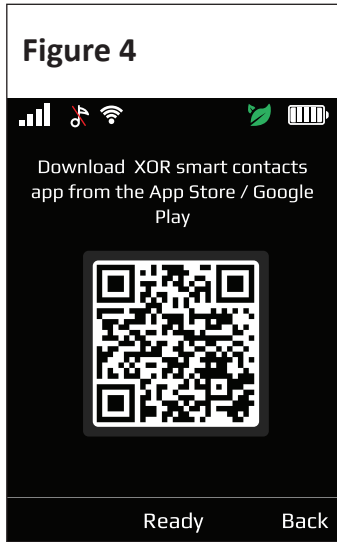

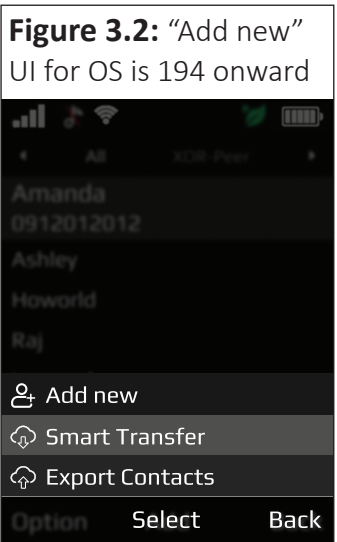

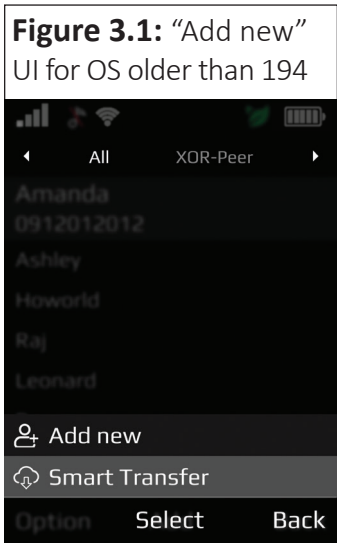

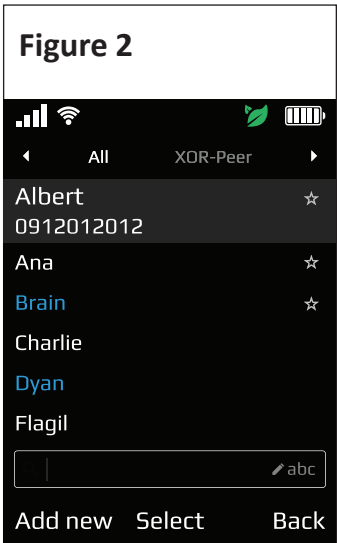

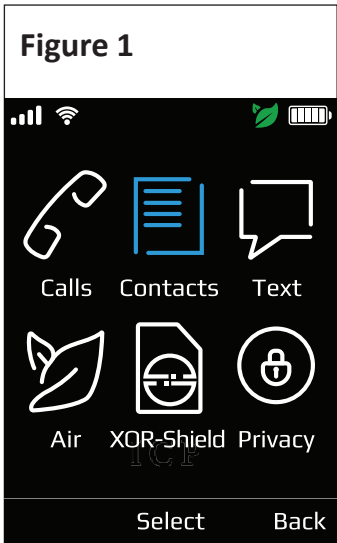

At this step, user selects “OK” to allow access to continue with the App.

3.2.3. Get the verification code

On XOR X2, select **Contacts -> Add new -> Smart Transfer**

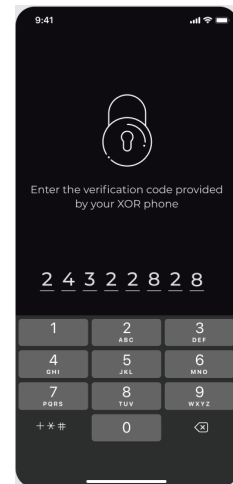

3.2.4. Adopt the verification code

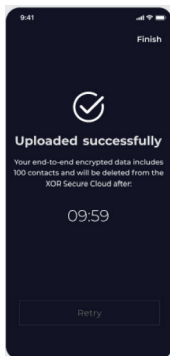

After allowing access to user's contacts in Figure 6, enter the verification code on the screen. Each code is valid for 5 minutes.

Enter 8 digits of verification code:

- If the code is accurate, move to the next step of the synchronizing contacts.
- If the code is entered inaccurately, the message **"You have entered wrong verification code. Please try again"** will display, and ask user to re-enter the code.

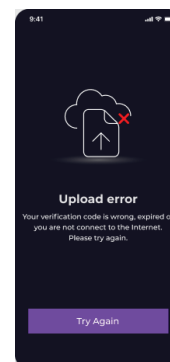

3.2.5. Download contacts

After the progress of encryption and upload to the server have been done successfully, **"Uploaded successfully"** message will display on screen. The screen shows 10-minute timer corresponding to the time the contacts remain on the server. Within 10 minutes, the data will be deleted from the server.

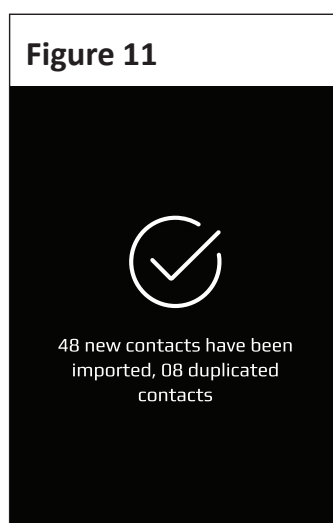

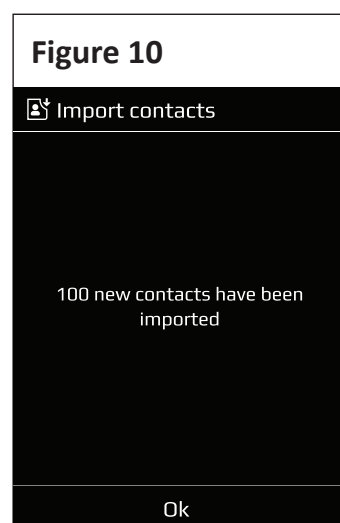

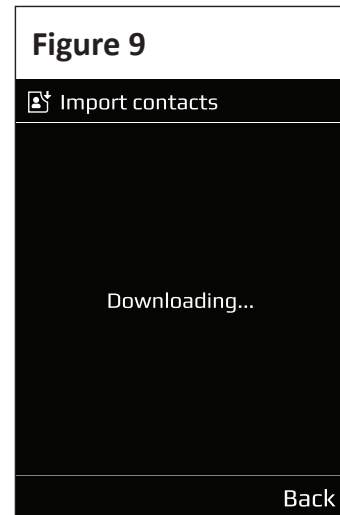

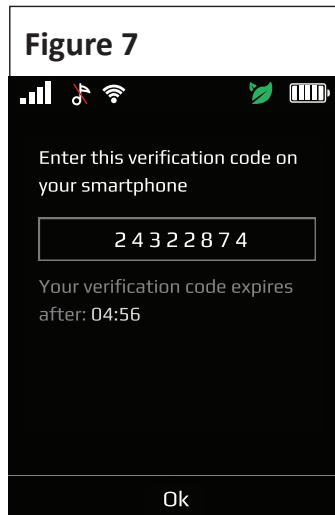

If the verification code is entered inaccurately, the user will have to start over the process.

User should ensure the stability of internet connection on both XOR X2 and smartphone before and during the uploading process. In case the network is unstable, the upload progress will be broken and you will have to start over again.

3.2.6. Download, decrypt and import contacts to XOR X2

- After contacts on smartphone are uploaded successfully to the server, select OK to start the download, decrypt, and import progress on XOR X2.
- After contacts are imported successfully, the screen will show a notification of total contacts have been done.

End of the process.
